

# AGGREGATE RESOURCES

Since the introduction of the Pits and Quarries Control Act in 1972, Skelton Brumwell & Associates has been a preeminent firm in aggregate resource planning and development. We have been involved in more than 430 aggregate projects for over 90 clients.

We provide comprehensive services in project coordination, site plan design, and technical studies and reports for municipal approvals and licensing of pits and quarries. We have professional engineers and technologists, land-use planners and an ecologist on staff. Our expertise in pit and quarry design and rehabilitation as well as related matters such as hydrology, and related Permits to Take Water and Certificates of Approval for Discharge, environmental

evaluation, and traffic studies ensures our client's needs are met.

We have experience dealing with operators and municipalities in areas that are newly designated, and have prepared Class A and B Site Plans for Grandfathered Licenses. The Ministry of Natural Resources retained us to prepare generic Site Plans for Class A and B licenses in areas newly designated that illustrate the Site Plan requirements under the ARA.

Additionally our firm has successfully represented clients at Project Information Sessions, public meetings and the Ontario Municipal Board.
