

SITE ENGINEERING SERVICES

Skelton, Brumwell has been providing quality and trusted consulting services to clients for over 45 years.

Successful development of any project site requires diligent engineering, planning and design. The site area around a project building is what connects it with the outside world. It provides the conduit for services, outdoor amenity spaces as well as providing access for patrons.

The successful design of a new building (or expansion of an existing building) is a team effort. Many areas of expertise and design disciplines must be brought together to provide input. As the site engineering consultant, Skelton Brumwell

is a component of that successful design team.

Working with other professionals to deliver a complete project Skelton Brumwell provide design expertise to connect municipal services, design of site grading to facilitate access and direct drainage, and design of local road improvements.

In location where full municipal services are not available, Skelton Brumwell designs on-site water and sewage treatment systems.
